CZ 4M HEADOVER

A versatile headover made of double layer Merino Moira knit.

The Moira fibres have excellent wicking properties, drawing moisture away from the body into the outer woollen layer. This layer is made up of extremely fine Merino Super Fine 16 μ m fibres that absorb moisture coming from the inside, thereby providing perfect thermal insulation.

The inner layer made of polypropylene microfiber feels very pleasant on the skin, this item of clothing may therefore be worn also by people who are sensitive to 100% wool products. The wool is treated with Superwash technology to avoid felting.

Material weight.

190 g/m²

Merino wool
Moira Polypropylen

Product Code: UN-012

CZ 4M SUMMER HAT

The summer hat has been designed for everyday use as a base layer to be worn under a helmet or for sport activities.

Regarding construction, a new type of knit has been used, namely the Ultralight New. It is used in products where fast wicking is required during varying physical exertion.

The Ultralight New is the second generation of successful material with an improved weave. The knit is made of fine polypropylene silk, making it much nicer to touch than previous generations. The weave is very airy, which is a decisive factor in maintaining the thermal balance of the body.

CZ 4M WINTER HAT

The winter hat is made of the Trio material, which is one of the warmest MOIRA materials.

The different fibre properties and their ratio in the overall weave of this three layer knit fabric provide perfect thermal insulation and guarantee rapid wicking.

Closest to the skin are velour loops made of polypropylene silk. The middle is the wicking layer and the third layer made of MOIRA yarn can dissipate large amounts of the absorbed moisture. The loops retain a sufficient amount of heated air, thus increasing the thermal protection of the body. The TRIO retains heat even during limited physical activity while staying breathable.
